

Diamond Plate Anti Fatigue

In a rigorous environment, exceptional comfort, dimensional stability and durability are the hallmarks of a successful antifatigue mat. Our Diamond Plate products are manufactured from specially formulated proprietary low static formulation vinyl compounds. Diamond Plate mattings are a superior value with puncture resistance that exceeds comparable rubber products by up to 90%. This increased spike resistance helps eliminate premature failure due to exposure to casters, heels, and other sharp objects. These materials are only available through the Rhino Mats and Matting division Ranco Industries.

- Surface shall be permanently fused to a closed cell polymeric sponge base, comprised of polyvinyl chloride, acrylnitrile butadlene rubber and chloroprene.
- Sponge base shall have a skin surface to block moisture and resist most oils and industrial chemicals.
- Edges of sponge base shall be beveled to within 1.5" of the top surface to effectively taper the edges of th surface to the floor and create a visibly bonded incline around the perimeter of the mat, and seal the edge of the beveled sponge base to the surface.
